

Emissions Trading

Presented by **JULIAN TURECEK** *BE(Chem)(Hons) (Melb), BComm (Melb), MAppFin (Macq.)*
 Investment Manager, Cleantech Ventures

Course Synopsis

As climate change has emerged as one of the critical issues of our time, emissions trading has become, both in Australia and globally, arguably the preferred policy tool to achieve cuts in greenhouse emissions. There is now much focus on the emergence of a domestic cap-and-trade emissions trading scheme to commence by 2010; this market is expected to be worth around \$20 billion annually by the end of the next decade.

Course Content

The course covers the domestic and global policy debate (including the outcomes of Bali), why governments favour trading over a carbon tax, an overview of the greenhouse markets currently in operation and how they may be linked, how companies will be impacted by a price on carbon, the critical design features of an emissions trading scheme, how emissions trading works, and how the capital markets are responding. It also features a trading simulation to explore decision-making in a carbon-constrained world.

Designed for

Finance professionals, risk managers, traders and analysts.

Presenter

JULIAN TURECEK *BE(Chem)(Hons) (Melb), BComm (Melb), MAppFin (Macq.)*

Julian is an experienced energy and greenhouse professional with over 15 years experience in the market. He recently joined Cleantech Ventures, a venture capital company investing in clean technologies. Prior to this he led energy and climate change policy at Origin Energy. He has been involved in commercial approaches to climate change for over 10 years, including establishing and running Origin's carbon markets trading desk in 2001.
