Presented by

Julian Turecek, National Manager
Policy & Government Affairs, Origin Energy

rma AUSTRALIA

Risk Management Association Inc

Course Synopsis

As climate change has emerged as one of the critical issues of our time, emissions trading has emerged, both in Australia and globally, as arguably the preferred policy tool to achieve cuts in greenhouse emissions. In the wake of the Australian election and the Bali Roadmap, there is now much focus on the emergence of a domestic cap-and-trade emissions trading scheme to commence by 2010; this market is expected to be worth around \$20 billion annually by the end of the next decade. This course, designed for finance professionals, is designed to bring participants up to speed with the emerging domestic and global carbon market.

Course Content

The course covers the domestic and global policy debate (including the outcomes of Bali), why governments favour trading over a carbon tax, an overview of the greenhouse markets currently in operation and how they may be linked, how companies will be impacted by a price on carbon, the critical design features of an emissions trading scheme, how emissions trading works, and how the capital markets are responding. It also features a trading simulation to explore decision-making in a carbon-constrained world.

Designed for

Finance professionals, risk managers, traders and analysts.

Presenter

JULIAN TURECEK BE(Chem)(Hons) (Melb), BComm (Melb), MAppFin (Macq)
Julian is currently National Manager, Policy & Government Affairs at Origin Energy where he is responsible for developing and advocating the company's position on energy market and greenhouse issues, including emissions trading. He has been involved in commercial approaches to climate change for over 10 years, including establishing Origin's carbon markets trading desk in 2001.
